

Car•tell [kahr-tell]: *Value, Dependability, Lead-Generator*

Cartell DriveGuard alarms and Free Exit systems offer superior quality, capabilities, service and value for resellers and their customers.

Our leading-edge, versatile technology, ease of installation, unparalleled support and five year warranty make Cartell the smart choice for vehicle detection systems.

How Does It Work? - Flawlessly

Instead of creating a sensing field, Cartell utilizes the Earth's magnetic field. Our sensor detects moving steel. It is buried beside the driveway, requiring no driveway renovation. It cannot be tripped by people, objects and animals and is not affected by wind and weather. False alarms are virtually eliminated.

What Do I Need? - Just Three Components

Cartell's systems need no more than 3 components:

A Sensor – either Cartell's sensor probe, buried beside the driveway, and/or any sensing device with a N.O., dry, floating relay contact (see page 13).*

A Control Unit – one of Cartell's control units (see pgs. 4-6).*

A Sounder – choose among three Cartell sounders or use your own compatible sounder (see page 14).*

What Does It Do? - The Sky is no Limit!

Cartell offers two stand-alone systems or a system that integrates seamlessly with security and home automation systems.

Our stand-alone systems trigger audio devices, lights, cameras, and other widgets (see pages 4 & 5).*

When integrated with home automation and security systems, Cartell triggers key pads, sends output to post messages, notifies external sources, interacts with computers, and more (see p. 6).*

Also available is a remote system that triggers RF or satellite transmitters to interact with a wireless interface (see page 8).*

Two free exit systems automatically open gates (see page 10).*

What Do I Get? - A Lead-Generating Machine

You get a dependable system, providing years of trouble-free service, with a proven, long field life, and a five year warranty.

Once our systems are installed, there are no manuals to learn, gadgets to adjust or software to program.

Homeowners will enjoy protection, peace of mind and convenience. They will be made aware when vehicles arrive. This is especially comforting to women and children home alone. Cartell also welcomes those arriving at night with a lighted path of safety into the house as soon as they drive into the driveway.

For the reseller, Cartell offers a first class addition to any portfolio, offering notoriety and promoting recurring leads.

Where Do I Get It? - Outlets Galore

Cartell offers to installers a network made up of hundreds of fine distributors in several markets. Installers then sell directly to homeowners and other customers.

Cartell Product Overview

Safety and convenience homeowners want!

For over thirty-five years Cartell has offered the highest quality, most dependable vehicle detection systems on the market, providing peace of mind, convenience and unmatched value, with a five year warranty.

Vehicles Trigger:

- Inside & Outside Lights
- Sounders
- Cameras
- Transmitters
- Security systems
- Home automation systems
- Gate Openers

A

DriveGuard Basic System

DriveGuard Basic system provides a trigger and one relay closure to trip sounders, cameras and other devices.

It includes everything necessary for a basic vehicle detection system.

B

DriveGuard Ultra System

DriveGuard Ultra System provides a trigger and a relay to trip sounders, cameras and other devices.

It includes a second 15-amp relay to control 1800 watts of lights.

C

DriveGuard Integrator System

With just two components, you can add vehicle detection to any home automation, security or lighting system.

For seamless integration with any home system, use DriveGuard Integrator.

D

Remote Vehicle Detection System

The CP-1TT system provides a trigger and a relay closure to trip RF or satellite transmitters.

It is powered by a 9 or 12 volt battery.

E

Two Free Exit Systems

GateMate Self-Contained system has no external circuit board to install. Just bury beside driveway.

Pioneer system includes a small circuit board to install inside the operator and a sensor probe beside the driveway (cable up to 3000').

F

DriveGuard Short Driveway System

This system is required for homes with driveways under 75 feet.

This is a dual-probe system that can be as close as 10 feet to outside cross traffic as part of the DriveGuard Basic and DriveGuard Ultra systems.

G

DriveGuard Indoor/Outdoor Sounders

Three sounders can be purchased for use with DriveGuard Basic or Ultra systems: CT-A1 Indoor sounder, CT-11 Outdoor Sounder, and AA-1 universal Sounder.
